One of the beneficial aspects of SHOUTcast is a unique authorization key "**authhash**" which serves to validate your stream(s).

An authhash also contains important information about your station which allows it to be listed on the [shoutcast.com](http://shoutcast.com) website and in directories which use the SHOUTcast API.

Create and manage your authhash by logging into [rmo.shoutcast.com](http://rmo.shoutcast.com).

An authhash needs to be created for this stream.

Stream Uptime:	1 hour 38 minutes 57 seconds	

**Note as of yet,** Shoutcast.com can't directly play AAC+ streams when you hit the stream play button.

Therefore it requires and prompts users (on Firefox and Opera browsers to click the download button to be able to listen via software media players like iTunes, Windows Media Player, VLC Player among others.

The ACC+ format is widely thought of as superior to mp3 and yet very data friendly with lower file size. We see more and more software applications and devices adopting it ever so efficiently. – [www.streemlion.com](http://www.streemlion.com) |
